

NARAGAM GNANA DEEPIKA

Software Engineer | Cybersecurity Enthusiast

Avanigadda, Andhra Pradesh | +91 9676726539 | naragamgnanadeepika@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Computer Science Engineering graduate specializing in Cybersecurity and Blockchain Technology, with hands-on experience developing secure software applications through academic projects and internships. Proficient in Python, C and Git. Strong foundation in software development, problem-solving, and secure coding, with a passion for building scalable applications and contributing to innovative software engineering teams.

TECHNICAL SKILLS

- **Programming & DSA:** Python, C, Data Structures & Algorithms
- **Web Development:** HTML, CSS, JavaScript, Flask, Django
- **Databases:** MySQL, PostgreSQL, SQLite
- **Cybersecurity:** AES-128 (Fernet) & SHA-256 cryptography, secure coding, Kali Linux, Burp Suite, JS vulnerability analysis, file-integrity monitoring
- **Networking & OS:** TCP/IP, Cisco Packet Tracer, Linux, Windows Internals/APIs
- **Cloud & Tools:** AWS fundamentals, Git/GitHub, Watchdog, TensorFlow, Keras

PROJECTS

Secure File Transfer Monitoring System (SFTS) — Python, Flask, SQLite, Watchdog, Fernet AES-128, SHA-256

- Designed and developed a full-stack Flask web application that monitors file transfers in real time across a watched directory, writing clean, modular, maintainable code across 5 core components (Flask server, filesystem watcher, encryption module, database layer, and dashboard UI).
- Implemented SHA-256 pre/post-transfer integrity hashing and Fernet AES-128 encryption for every uploaded file, paired with an 8-rule threat detection engine (suspicious extensions, double extensions, hidden files, sensitive filenames/directories, oversized files, integrity violations, and suspicious transfer destinations) across 3 severity tiers; validated live, correctly flagging a renamed malicious executable via hash mismatch and extension detection while passing a clean file through with zero false positives.

Windows Service and Process Monitoring Agent (WSMPA) — Python, Windows APIs, SQLite

- Built a lightweight Python agent (psutil, wmi, win32service) that enumerates Windows processes and services in real time, mapping parent-child process trees and auditing startup services across a 6-step detection pipeline (enumeration, tree-building, service audit, unauthorized-process detection, alerting, and report export).
- Implemented a 5-rule, severity-scored detection engine (CRITICAL/HIGH/MEDIUM) flagging suspicious parent-child spawns (e.g., winword.exe to powershell.exe), blacklisted processes, suspicious execution paths, and unknown services, exporting structured JSON and plaintext reports; maintained under version control via Git/GitHub and validated end-to-end through a live web-based scan interface.

Visual Search and Image Recognition System — Python, TensorFlow, Keras, Matplotlib

- Evaluated and compared three deep learning architectures (Sequential, CNN, VGG16) trained on the CIFAR-10 dataset (60,000 images), analysing accuracy/loss curves across up to 50 epochs; identified the CNN model as the top performer at 74.7% validation accuracy, outperforming the Sequential model by 27 points and VGG16 by 64 points.

EDUCATION

B.Tech, Computer Science Engineering (Cybersecurity & Blockchain Technology)

July 2022 – May 2026

- KL University | CGPA: 9.4/10

Bachelor of Business Administration (BBA)

Jan 2023 – Mar 2026

- Concurrent degree covering core business principles and management strategy

CERTIFICATIONS

- AWS Cloud Practitioner
- Red Hat Certified Enterprise Application Developer
- Juniper Networks Certified Associate (JNCIA-Junos)
- Salesforce AI Associate
- Blockchain, DeFi & FinTech Professional Capstone Certification

ACHIEVEMENTS & LEADERSHIP

- Led a team in Flipkart GRID 6.0 (Software Development Track), strengthening core computer science fundamentals under competition constraints.
- Ranked Top 19 nationally in NEOCODETHON, a competitive DSA contest in C, demonstrating strong algorithmic problem-solving under time pressure.
- Completed a 3-day Generative AI Bootcamp with Outskill (Skill India recognized).

INTERNSHIPS

Cybersecurity Intern, Prodigy InfoTech

- Gained hands-on experience applying cybersecurity fundamentals and practical defensive techniques across multiple domains.

Cloud Virtual Intern, AICTE

- Developed and implemented cloud-based solutions to improve infrastructure scalability and performance.
